

NJIT Research Newsletter

Issue: ORN-2021-01

Happy, Healthy and Prosperous 2021!

NJIT Research Newsletter includes recent awards, and announcements of research related seminars, webinars, national and federal research news related to research funding, and **Grant Opportunity Alerts** (with links to sections). The Newsletter is posted on the NJIT Research Website <https://research.njit.edu/funding-opportunities> .

NJIT Pandemic Recovery Plan Research Continuity and Phased Recovery Plan

<https://research.njit.edu/njit-pandemic-recovery-plan>

NJIT faculty, staff, and students at research facilities must follow the specific social distancing and safety protocols including the use of personnel protective equipment (PPE) as required by the institutional, state and federal guidelines in the respective phase of the research continuity plan. State and national information regarding current conditions can be found at:

- New Jersey's COVID-19 information hub: <https://covid19.nj.gov/index.html>

- CDC guidelines on “Symptoms of Coronavirus”: <https://www.cdc.gov/coronavirus/2019-ncov/symptoms-testing/symptoms.html>
- CDC guidelines on “Use of Cloth Face Coverings to Help Slow the Spread of COVID-19”: <https://www.cdc.gov/coronavirus/2019-ncov/prevent-getting-sick/diy-cloth-face-coverings.html>

The details on NJIT Research Continuity and Phased Recovery Plan and associated protocols are posted on the website <https://research.njit.edu/njit-pandemic-recovery-plan>

[Grant Opportunity Alerts](#)

Keywords and Areas Included in the Grant Opportunity Alert Section Below

NSF: NSF Scholarships in Science, Technology, Engineering, and Mathematics (S-STEM); Center for Advancement and Synthesis of Open Environmental Data and Sciences; Future of Work at the Human-Technology Frontier: Core Research (FW-HTF); Geomorphology and Land-use Dynamics (GLD); Enabling Discovery through GEnomics (EDGE); Dimensions of Biodiversity FY202; Long Term Research in Environmental Biology (LTREB); Integrative Research in Biology (IntBIO)

NIH: Regulation of Brain Regional and Cell Type Specific Proteome Dynamics in Aging and Alzheimer's Disease (R01); Research Experience in Genomic Research for Data Scientists (R25); Application of Artificial Intelligence and Machine Learning for Advancing Environmental Health Sciences (R43 and R41); Initiative for Maximizing Student Development (IMSD) (T32)

Department of Defense/US Army/DARPA/ONR: National Defense Education Program (NDEP) for STEM; Research Interests of the United States Air Force Academy; Data and Analysis Center (DAC); Ultra-wide Bandgap RF Electronics Center Fiscal Year 2022; Synthetic Biology; Science & Technology for Advanced Manufacturing Projects (STAMP)

Department of Transportation: Advanced Transportation and Congestion Management Technologies Deployment Initiative

Department of Agriculture: Biotechnology Risk Assessment Research Grants Program; Scientific Cooperation Research Program (SCRIP); Agriculture and Food Research Initiative - Foundational and Applied Science

Department of Labor: Workforce Pathways for Youth Grant Program

Department of Commerce/EDA: Coastal and Ocean Modeling Testbed Project; FY2021 to FY2023 NOAA Broad Agency Announcement (BAA)

EPA: Training and Technical Assistance to Improve Water Quality

Department of Energy: Materials and Chemical Sciences Research for Quantum Information Science FY21 SETO Systems Integration and Hardware Incubator Funding Program; Scientific Discovery Through Advanced Computing: Partnerships in Basic Energy Sciences; Hydrogen and Fuel Cell Technologies Office (HFTO) R&D FY 2021 Funding Opportunity Announcement

NASA: ROSES 2020: Heliophysics Flight Opportunities in Research and Technology; ROSES 2020: In-Space Validation of Earth Science Technologies

National Endowment of Humanities: Institutes for Higher Education Faculty

Private Foundations: Bill & Melinda Gates Foundation: Grand Challenge: ICODA COVID-19 Data Science

[Recent Research Grant and Contract Awards](#)

Congratulations to faculty and staff on receiving research grant and contract awards!

PI: Murat Guvendiren (PI)

Department: Chemical and Material Engineering

Grant/Contract Project Title: CAREER: Cell-Instructive Smart Bioinks for Tissue and Organ Printing

Funding Agency: NSF

Duration: 02/01/21-01/31/22

PI: Xuan Liu (PI) and Yuanwei Zhang (Co-PI)

Department: Electrical and Computer Engineering; Chemistry and Environmental Sciences

Grant/Contract Project Title: Optically computed compressive OCT for ultra-high speed phase-resolved dynamic imaging

Funding Agency: NIH

Duration: 01/01/21-12/31/21

PI: Deane Evans (PI)

Department: Center for Building Knowledge

Grant/Contract Project Title: Clean Energy Learning Center

Funding Agency: State of NJ - BPU (Board of Public Utilities)

Duration: 07/01/16-06/30/21

PI: Michel Boufadel (PI) (Corrected)

Department: Center for Natural Resources

Grant/Contract Project Title: Characterization of Modeling of Water Mixing Energies and Particle Behaviour during Wave Generation in CanmetEnergy-Devon Spill Tanks

Funding Agency: Department of Natural Resources (Canada)

Duration: 10/13/20-03/31/22

[In the News...](#)

(National and Federal News Related to Research Funding and Grant Opportunities)

Federal Data Strategy: The Federal Data Strategy is an important framework that stitches together a number of different legislative and administrative initiatives into a coherent whole:

- the [GPR Modernization Act of 2010](#)
- open data initiatives, such as data.gov
- the [Digital Accountability and Transparency \(DATA\) Act](#)
- the [Grant Reporting Efficiency and Agreements Transparency \(GREAT\) Act](#)
- the [Foundations in Evidence-Based Policymaking Act](#), which includes the designation of chief data officers and agency evaluation officers, and the creation of agency learning agendas.
- the efforts of external advocates for data sharing and usage such as the [Data Coalition](#) and [Results for America](#)

The Federal Data Strategy includes a 10-year roadmap for federal agencies and it is [on the verge](#) of releasing its 2021 action plan. While many of these federal-level initiatives rely on state and local data components, the current COVID pandemic demonstrates the need for a much more proactive intergovernmental data sharing strategy, per Wiseman.

In her report, Wiseman showcases a number of successful initiatives that demonstrate the value of investing in data sharing efforts at the federal, state, and local levels, linking data from multiple sources across agency and jurisdictional boundaries. Three noteworthy initiatives include:

State Department’s use of data to repatriate Americans stranded overseas during the pandemic. In January 2020, the data team at State began to bring together data from disparate public and private sources to create real-time information updates for department leadership on how to bring Americans home safely, first from Wuhan, China, and then from outposts around the globe. Under the leadership of Janice deGarmo, the department’s acting chief data officer, the data team quickly brought together all the data it could to help understand, monitor, and respond to the crisis, both from across the department and from external sources. Applying lessons from the Ebola outbreak, it synthesized data from CDC, Homeland Security, Customs and Border Protection, publicly available information, and State’s own on the ground intelligence to help repatriate both employees and others needing help. [This effort](#) led to the safe repatriation of over 100,000 Americans from 136 countries on over 1,100 flights working with embassies and consulates in every corner of the globe.

Virginia’s leverage of data trust to rapidly respond to COVID-19. Almost a decade ago, the state of Virginia began a state-local data sharing effort, starting with an opioid data project in one community. Data were shared across state and local law enforcement, social services, judicial, and health agencies in order to better target prevention and treatment efforts. In 2017, the opioid death rate finally [began to decline](#) in that community and effort was expanded statewide. This project demonstrated the value of broader data collection efforts and led in 2018 to [the formalization](#) of the role of a statewide chief data officer, the Commonwealth Data Trust, and the launch of the state’s Open Data Portal. These foundational data sharing efforts paved the way for the state’s ability in early 2020 to [quickly stand up](#) a [COVID-19 dashboard](#) in a matter of days because it had already created a data sharing platform with agreements already in place with various state and local agencies in response to the earlier opioid crisis. This dashboard gives state leaders near real-time information about hospitals in need of supplies and locations with the largest COVID outbreaks.

More information is posted on the [GovExec website](#).

Regulators Can Help Clear the Way for Entrepreneurial Energy Companies to Innovate:

Government regulation can pose a significant barrier for [new ventures](#) seeking to enter regulated markets, such as electric power, because they typically lack the resources and experience to meet requirements posed by regulations. For large established companies, by contrast, operating in regulated markets can be beneficial because they have the resources and experience to overcome regulatory hurdles, while smaller competitors don’t. Large incumbents can also set the rules of the game in their favor by [influencing lawmakers](#) to create cumbersome legislation that makes it harder for new ventures to establish themselves. We sought to discover the conditions under which clean-tech entrepreneurs were able to enter regulated markets in the absence of a formal policy change. To do this, we examined the role of the regulatory agencies that are responsible for implementing the laws created by legislators. We looked specifically at regulatory discretion – the flexibility that agencies have to interpret and implement public policy – and its role in influencing market entry of new ventures. To measure discretion, we looked at the number of laws, known as administrative procedures acts, that limit the freedom of regulatory agencies to interpret and implement policies.

We found that when regulators have low discretion, their decision-making is directed by legislators, who are often lobbied by existing companies in efforts to prevent new ventures from entering their markets.

However, when regulators have high discretion, they are more insulated from pressure from legislators and can make decisions based on their mission to serve the public interest.

Our [research](#) suggests that activists may have a greater impact on entrepreneurial energy innovation when regulators have more discretion. Because discretion places more responsibility for regulatory decision-making on the regulatory agency than on legislators, it allows activists to influence regulators by challenging their legitimacy and reputation.

More information is posted on the [GovExec website](#).

Pentagon Releases Strategy for Countering Small Drones: A new Pentagon strategy document defines an enterprise approach for countering small unmanned aircraft systems, known as sUAS, and outlines three lines of effort to address challenges presented by the proliferation of the devices.

The Defense Department [publicly released the strategy Thursday](#), and officials from the Army's Joint C-sUAS Office, or JCO, said during a Friday Center for Strategic and International Studies webinar the planning document for implementing the strategy is set to be released by the end of the month. The strategy is the first to address counter-sUAS at the enterprise level, Nicole Thomas, division chief for strategy and policy for the JCO, said.

"Through the implementation of this strategy, the department will be positioned to address the small UAS challenge we encounter across all three operating environments—that's homeland host nation and contingency locations," Thomas said. "So the department is taking a holistic approach to the problem so we can provide commanders with forces to protect DOD personnel, assets, facilities and missions from current and future small UAS threats."

Because of technological innovation and lower price points, sUAS applications are proliferating and only becoming more effective, according to the strategy's statement defining the central challenges presented by sUAS. Small UAS can enable adversaries to extend sensor coverage and communications, conduct operations from afar with a greater presence, perpetrate cyberattacks and collect intelligence, according to the strategy.

The strategy is the latest development in an effort to consolidate C-sUAS approaches, according to Maj. Gen. Sean Gainey, director of the JCO, who also spoke during the CSIS webinar.

"The services have been working on this problem set really since about 2016, and were producing a lot of capability against this threat set," Gainey said. "However, we were spending a lot of money in the department, a couple billion dollars worth, developing equipment with urgent requirements."

More information is posted on the [NextGov website](#).

The Defense and Homeland Security Departments to Develop Cybersecurity Technologies for National Security Applications:

The Defense Innovation Unit and the Cybersecurity and Infrastructure Security Agency are teaming up to share information and coordinate cybersecurity technology investments, DOD announced. DIU, the Pentagon's incubator for commercial technologies developing applications for national security, and CISA, the lead civilian cybersecurity agency that monitors election security and response to [the SolarWinds breach](#), signed a memorandum of agreement Oct. 19, according to Jeff Kleck, DIU's cyber director. The MOA is initially for three years. "CISA and DIU have complementary missions and capabilities that both reinforce the Department of Homeland Security and DOD and are additive to one another," Kleck said in the press release. "Together we collectively reach across a broad swath of national interests related to cybersecurity."

Signing the agreement is the first step in the process of determining how to better unify efforts to develop cybersecurity technologies for national security applications across the federal government, and CISA and DIU are just beginning to think about how to coordinate investments and potentially share technology with DHS that DIU has already developed. More details regarding what, exactly, collaboration

and coordination of investments will look like are still to come, according to Kleck. More information is available on the [NexGov website](#).

[Webinar and Events](#)

Event: MCB Virtual Office Hour: Priorities and Opportunities

Sponsor: NSF

When: January 13, 2021, 2.00 PM – 3.00 PM

Website: https://www.nsf.gov/events/event_summ.jsp?cntn_id=301899&org=NSF

Brief Description: Join us for our virtual office hour to learn about ongoing and new opportunities at the National Science Foundation and the Division of Molecular and Cellular Biosciences (MCB)!

For our first Office Hour on Wednesday, January 13 from 2-3pm EST, we will discuss “[Molecular and Cellular Biosciences at the NSF – Priorities and Opportunities](#),” followed by an open Q&A session.

Questions should be broad and of potential interest to others.

To Join the Webinar: Please use this [registration page](#) to join us. Visit the [MCB Blog](#) to view upcoming office hour dates and topics as well as previous office hour presentations.

Event: EDGE Program Webinar

Sponsor: NSF

When: January 15, 2021, 2.00 PM – 3.00 PM

Website: https://www.nsf.gov/events/event_summ.jsp?cntn_id=301840&org=NSF

Brief Description: On January 15 at 2:00 PM EST, the Division of Integrative Organismal Systems (IOS), together with the Divisions of Biological Infrastructure (DBI), Environmental Biology (DEB), and Molecular and Cellular Biosciences (MCB) in the Directorate for Biological Sciences (BIO) at the National Science Foundation (NSF) and the National Human Genome Research Institute (NHGRI) of the National Institutes of Health (NIH) will host a webinar about the [Enabling Discovery through GENomics \(EDGE\) program \(NSF 21-546\)](#). Following a brief presentation, program directors from all of the Divisions and agencies will be available to answer questions from participants.

Through the EDGE program, the NSF and the NIH support genomic research that addresses the mechanistic basis of complex traits in diverse organisms within the context (environmental, developmental, social, and/or genomic) in which they function. The program also continues to support the development of innovative tools, technologies, resources, and infrastructure that advance biological research focused on the identification of the causal mechanisms connecting genes and phenotypes.

To Join the Webinar: Register in advance for this

webinar: https://nsf.zoomgov.com/webinar/register/WN_G6jcpqjjRFCjcfSy0YbCxA

Event: Navigating the New Arctic Webinar

Sponsor: NSF

When: January 15, 2021, 2.00 PM – 3.00 PM

Website: https://www.nsf.gov/events/event_summ.jsp?cntn_id=301877&org=NSF

Brief Description: On January 15, 2-3pm ET, join the National Science Foundation (NSF) and the Interagency Arctic Research Policy Committee (IARPC) for a webinar introducing the latest [NSF Navigating the New Arctic solicitation \(NSF 21-524\)](#).

Navigating the New Arctic (NNA) seeks innovations in fundamental convergence research across the social, natural, environmental, computing and information sciences, and engineering that address the

interactions or connections among natural and built environments and social systems, and how these connections inform our understanding of Arctic change and its local and global effects. Program officers will highlight major changes from the previous solicitation, review goals of the program, and be available for a Q&A session.

To Join the Webinar: Learn more and register at <https://www.iarpccollaborations.org/events/20256>

Event: DMS Virtual Office Hours

Sponsor: NSF

When: January 21, 2021, 11.00 AM – 12.00 PM

Website: https://www.nsf.gov/events/event_summ.jsp?cntn_id=301870&org=NSF

Brief Description: The Division of Mathematical Sciences (DMS) is hosting virtual office hours to share information about NSF’s current operations and provide guidance to the mathematical sciences community. This will also allow the community to ask questions, share concerns, or offer suggestions on how DMS can do more to address the impact of COVID-19 on the research community. All members of the mathematics research community interested in the work of DMS are welcome to attend.

Events are planned at roughly monthly intervals, and the topics will vary for each event. The event will be in the form of a webinar, starting with a brief presentation of a few selected current topics, with DMS program directors available to answer questions from the community.

To Join the Webinar: Participants should register (and may do so in advance) at the web page https://nsf.zoomgov.com/webinar/register/WN_t1ON448FQHKW9FCJjXMxQ

Event: Build and Broaden 2.0 Informational Webinar

Sponsor: NSF

When: January 22, 2021, 2.00 AM – 3.30 PM

Website: https://www.nsf.gov/events/event_summ.jsp?cntn_id=301828&org=NSF

Brief Description: Please join NSF's Directorate for Social, Behavioral and Economic Sciences (SBE) for an informational webinar about the Build and Broaden 2.0 program.

The [Build and Broaden program](#) supports cutting-edge research, training opportunities and new research infrastructure in the social, behavioral and economic sciences at minority-serving institutions, including historically Black colleges and universities, Hispanic-serving institutions and tribal colleges and universities.

This event will feature:

- Remarks by SBE Assistant Director Dr. Arthur Lupia and SBE Deputy Assistant Director Dr. Kellina Craig-Henderson
- Presentations from SBE program directors about the Build and Broaden 2.0 program and solicitation
- A Q&A session for participants to ask questions

To Join the Webinar: Please register at [Build and Broaden 2.0 ZoomGov Webinar Registration link](#).

[Back to Contents](#)

[Grant Opportunities](#)

[National Science Foundation](#)

Grant Program: NSF Scholarships in Science, Technology, Engineering, and Mathematics (S-STEM)

Agency: National Science Foundation NSF 21-550

RFP Website: <https://www.nsf.gov/pubs/2021/nsf21550/nsf21550.htm>

Brief Description: The main goal of the S-STEM program is to enable low-income, talented domestic students to pursue successful careers in promising STEM fields. Ultimately, the S-STEM program wants to increase the number of low-income students who graduate and contribute to the American innovation economy with their STEM knowledge. Recognizing that financial aid alone cannot increase retention and graduation in STEM, the program provides awards to Institutions of Higher Education (IHEs) to fund scholarships and to adapt, implement, and study effective evidence-based curricular and co-curricular activities that support recruitment, retention, transfer (if appropriate), student success, academic/career pathways, and graduation in STEM.

The program seeks to 1) increase the number of low-income academically talented students with demonstrated financial need obtaining degrees in S-STEM eligible disciplines and entering the US workforce or graduate programs in STEM; 2) improve support mechanisms for future scientists, engineers, and technicians, with a focus on low-income academically talented students with demonstrated financial need; and 3) advance our understanding of how interventions or evidence-based curricular and co-curricular activities affect the success, retention, transfer, academic/career pathways, and graduation of low-income students in STEM.

The S-STEM program encourages collaborations among different types of participating groups, including but not limited to partnerships among different types of institutions; collaborations of STEM faculty and institutional, educational, and social science researchers; and partnerships among institutions of higher education and business, industry, local community organizations, national labs, or other federal or state government organizations, if appropriate.

Scholars must be domestic low-income, academically talented students with demonstrated unmet financial need who are enrolled in an associate, baccalaureate or graduate degree program in an S-STEM eligible discipline. Proposers must provide an analysis that articulates the population of students they are trying to serve. This analysis must include the predicted number of students who meet all the eligibility requirements at the time of proposal submission as a proxy measure of the pool of students that would qualify in the future if the proposal is awarded. This number may be based on current and/or historical data about students who are currently pursuing degrees in the STEM disciplines targeted by the proposal.

S-STEM Eligible Degree Programs

- Associate of Arts, Associate of Science, Associate of Engineering, and Associate of Applied Science
- Bachelor of Arts, Bachelor of Science, Bachelor of Engineering and Bachelor of Applied Science
- Master of Arts, Master of Science and Master of Engineering
- Doctoral

S-STEM Eligible Disciplines

- Biological sciences (except medicine and other clinical fields)
- Physical sciences (including physics, chemistry, astronomy, and materials science)
- Mathematical sciences
- Computer and information sciences
- Geosciences
- Engineering
- Technology fields associated with the disciplines above (e.g., biotechnology, chemical technology, engineering technology, information technology)

Awards: Standard Grant or Continuing Grant; Anticipated Funding Amount: \$80,000,000 to \$115,000,000

The program supports four types of projects subject to availability of funds:

- Awards for Track 1 (Institutional Capacity Building) projects may not exceed \$750,000.

- Awards for Track 2 (Implementation: Single Institution) projects may not exceed \$1.5 million.
- Awards for Track 3 (Inter-institutional Consortia) projects may not exceed \$5.0 million.
- Collaborative Planning projects may not exceed \$150,000.

Letters of Intent: Not required

Proposal Submission Deadline: April 07, 2021; Track 1, 2, 3 and Collaborative Planning grants

Limit on Number of Proposals per Organization: An institution may submit one proposal (either as a single institution or as subawardee or a member of an Inter-institutional Consortia project) from each constituent school or college that awards degrees in an S-STEM eligible discipline. The reasoning behind this restriction is that any eligible student must have a clear single S-STEM program where the student can apply for a scholarship. See Additional Eligibility Information below for more details (see IV. Eligibility Information). Institutions with a current S-STEM award should wait at least until the end of the third year of execution of their current award before submitting a new S-STEM proposal focused on students pursuing the same discipline(s).

Contacts: Alexandra Medina-Borja, telephone: (703) 292-7557, email: amedinab@nsf.gov

- Michael J. Ferrara, telephone: (703) 292-2635, email: mferrara@nsf.gov
- Thomas D. Kim, telephone: (703) 292-5111, email: tkim@nsf.gov

Grant Program: Center for Advancement and Synthesis of Open Environmental Data and Sciences
Agency: National Science Foundation NSF 21-549

RFP Website: <https://www.nsf.gov/pubs/2021/nsf21549/nsf21549.htm>

Brief Description: NSF seeks to establish a Center fueled by open and freely available biological and other environmental data to catalyze novel scientific questions in environmental biology through the use of data-intensive approaches, team science and research networks, and training in the accession, management, analysis, visualization, and synthesis of large data sets. The Center will provide vision for speeding discovery through the increased use of large, publicly accessible datasets to address biological research questions through collaborations with scientists in other related disciplines. The Center will be an exemplar in open science and team science, fostering development of generalizable cyberinfrastructure solutions and community-driven standards for software, data, and metadata that support open and team science, and role-modeling best practices. Open biological and other environmental data are produced by NSF investments in research and infrastructure such as the National Ecological Observatory Network (NEON), the Ocean Observatories Initiative (OOI), the Long-Term Ecological Research (LTER) network, National Center for Atmospheric Research (NCAR), Critical Zone Observatories (CZOs), Integrated Digitized Biocollections (iDigBio), and the Global Biodiversity Information Facility (GBIF), as well as by many other public and private initiatives in the U.S. and worldwide. These efforts afford opportunities for collaborative investigation into, and predictive understanding of life on Earth to a far greater degree than ever before. The Center will help develop the teams, concepts, resources, and expertise to enable inclusive, effective, and coordinated efforts to answer the broad scientific questions for which these open data were designed, as well as key questions that emerge at interfaces between biology, informatics, and a breadth of environmental sciences. It will engage scientists diverse in their demography, disciplinary expertise, and geography, and in the institutions that they represent in collaborative, cross-disciplinary, and synthetic studies. It is expected that this new Center will build on decades of experience from NSF's prior investments in other synthesis centers, while providing visionary leadership and advancement for data-intensive team science in a highly connected and increasingly virtual world. It will serve as an incubator for team-based, data-driven, and open research that includes cyberinfrastructure, tools, services, and application development and innovative and inclusive training programs. The Center is also expected to spur collaborative interactions among the facilities and initiatives that produce open biological and other environmental data, and cyberinfrastructure efforts that

support the curation and use of those data, such as Biological and Chemical Oceanography Data Management Office (BCO-DMO), CyVerse, Environmental Data Initiative (EDI), DataOne, EarthCube, and Cyberinfrastructure (CI) Centers for Excellence, to address compelling research questions and to enable training and data product and tool development. The new Center will further enable data-driven discovery through immersive education and training experiences to provide the advanced skills needed to maximize the scientific potential of large volumes of available open data.

Awards: Cooperative Agreement; Anticipated Funding Amount: \$20,000,000

Letters of Intent: Required; April 01, 2021

Preliminary Proposal Due Date(s) (required) (due by 5 p.m. submitter's local time): April 29, 2021

Full Proposal Deadline(s) (due by 5 p.m. submitter's local time): September 15, 2021

Contacts: Matthew D. Kane, Program Director, BIO/DEB, telephone: (703) 292-7186, email: mkane@nsf.gov

- Reed S. Beaman, Program Director, BIO/DBI, telephone: (703) 292-7163, email: rsbeaman@nsf.gov
- Tevfik Kosar, Program Director, CISE/OAC, telephone: (703) 292-8970, email: tkosar@nsf.gov

Grant Program: Future of Work at the Human-Technology Frontier: Core Research (FW-HTF)

Agency: National Science Foundation NSF 21-548

RFP Website: <https://www.nsf.gov/pubs/2021/nsf21548/nsf21548.htm>

Brief Description: The overarching vision of this program is to support multi-disciplinary research to sustain economic competitiveness, to promote worker well-being, lifelong and pervasive learning, and quality of life, and to illuminate the emerging social and economic context and drivers of innovations that are shaping the future of jobs and work. For the purposes of this solicitation, work is defined as mental or physical activity to achieve tangible benefit such as income, profit, or community welfare. A proposal for a research grant in this program must focus on advancing fundamental understanding of future work and work outcomes for workers and society.

The specific objectives of the Future of Work at the Human-Technology Frontier program are to (1) facilitate multi-disciplinary or convergent research that employs the joint perspectives, methods, and knowledge of behavioral science, computer science, design, economics, engineering, learning sciences, research on adult learning and workforce training, and the social sciences; (2) support deeper understanding of the societal infrastructure that accompanies and leads to new work technologies and new approaches to work and jobs, and that prepares people for the future world of work; (3) encourage the development of a research community dedicated to designing intelligent technologies and work organization and modes inspired by their positive impact on individual workers, the work at hand, the way people learn and adapt to technological change, creative and inclusive workplaces (including remote locations, homes, classrooms, or virtual spaces), and benefits for social, economic, educational, and environmental systems at different scales; (4) promote deeper basic understanding of the interdependent human-technology partnership to advance societal needs by advancing design of intelligent work technologies that operate in harmony with human workers, including consideration of how adults learn the new skills needed to interact with these technologies in the workplace, and by enabling broad and diverse workforce participation, including improving accessibility for those challenged by physical or cognitive impairment; and (5) understand, anticipate, and explore ways of mitigating potential risks including inequity arising from future work at the human-technology frontier.

Proposals to this program should describe multi-disciplinary or convergent research that addresses technological, human, and societal dimensions of future work. Technological innovations should be integrated with advances in behavioral science, computer science, economic science, engineering, learning sciences, research on adult learning and workforce training, and the social sciences. Proposals

that address the impact of large-scale disruptions such as the Covid-19 pandemic on the future of jobs and work are also of interest.

Awards: Standard Grants; Anticipated Funding Amount: \$45,000,000

Up to 15 Planning Grant Awards, up to 15 Research Grant Awards, and up to 10 Transition-to-Scale Awards.

Three classes of proposals will be considered through this solicitation:

- FW-HTF Planning Grants (FW-HTF-P) may be requested for a total budget not to exceed \$150,000 and for a period of up to 1 year.
- FW-HTF Research Grants (FW-HTF-R) may be requested for a total budget between \$750,000 and \$2,500,000 and for a period of up to 4 years.
- FW-HTF Transition-to-Scale Grants (FW-HTF-T) may be requested for a total budget between \$1,500,000 and \$5,000,000 and for a period of up to 5 years.

Letters of Intent: Not required

Proposal Submission Deadline: March 23, 2021

Contacts: Balakrishnan (Prabha) Prabhakaran, CISE/IIS, telephone: (703) 292-4847, email: fwhtf-contacts@nsf.gov

- Tara Behrend, SES/SBE, telephone: (703) 292-8053, email: fwhtf-contacts@nsf.gov
 - Jordan Berg, ENG/CMMI, telephone: (703) 292-5365, email: fwhtf-contacts@nsf.gov
-

Grant Program: Geomorphology and Land-use Dynamics (GLD)

Agency: National Science Foundation NSF 21-547

RFP Website: <https://www.nsf.gov/pubs/2021/nsf21547/nsf21547.htm>

Brief Description: The GLD Program supports innovative fundamental research into processes that shape and modify earth's landscapes over a variety of length and time scales, with a focus on the Holocene. The program encourages research that quantitatively investigates the coupling and feedback among such processes, their rates, and their relative roles, especially in the contexts of variation in biologic, climatic, and tectonic influences and in light of changes due to human impacts. Such research may involve fieldwork, modeling, experimentation, theoretical development, or combinations thereof. GLD is particularly interested in increasing the participation of underrepresented groups in research and education such as women, persons with disabilities, and underrepresented minorities [1] [2], and those from geographically underrepresented areas in science, technology, engineering, and mathematics (STEM). Proposals submitted in response to this solicitation are strongly encouraged to involve PIs, co-PIs, postdoctoral researchers, students, and other personnel who are members of these groups.

Awards: Standard Grant or Continuing Grant; Anticipated Funding Amount: \$7,640,000

Letters of Intent: Not required

Proposal Submission Deadline: Proposals Accepted Anytime

Contacts: Justin Lawrence, Program Director, E 8483, telephone: (703) 292-2425, email: jlawrenc@nsf.gov

Grant Program: Enabling Discovery through GENomics (EDGE)

Agency: National Science Foundation NSF 21-546

RFP Website: <https://www.nsf.gov/pubs/2021/nsf21546/nsf21546.htm>

Brief Description: Through the Enabling Discovery through GENomics (EDGE) program, the National Science Foundation (NSF) and the National Institutes for Health (NIH) support research to advance understanding of comparative and functional genomics. The EDGE program supports the development of innovative tools, technologies, resources, and infrastructure that advance biological research focused

on the identification of the causal mechanisms connecting genes and phenotypes. The EDGE program also supports functional genomic research that addresses the mechanistic basis of complex traits in diverse organisms within the context (environmental, developmental, social, and/or genomic) in which they function. These goals are essential to uncovering the rules that underlie genomes-to-phenomes relationships and predict phenotype, an area relevant to [Understanding the Rules of Life: Predicting Phenotype](#), one of the [10 Big Ideas](#) for NSF investment. The goals also support the NHGRI priority to establish the roles and relationships of all genes and regulatory elements in pathways, networks, and phenotypes.

Awards: Standard Grant or Continuing Grant; Anticipated Funding Amount: \$10,000,000

Letters of Intent: Not required

Proposal Submission Deadline: March 16, 2021; February 17, 2022

Grant Program: Dimensions of Biodiversity FY2021

Agency: National Science Foundation NSF 21-545

RFP Website: <https://www.nsf.gov/pubs/2021/nsf21545/nsf21545.htm>

Brief Description: Despite centuries of discovery, most of our planet's biodiversity remains unknown. The scale of Earth's unknown diversity is especially troubling given the rapid and permanent loss of biodiversity across the globe. The goal of the Dimensions of Biodiversity campaign is to transform how we describe and understand the scope and role of life on Earth.

This campaign promotes novel integrative approaches to fill the most substantial gaps in our understanding of the diversity of life on Earth. It takes a broad view of biodiversity, and focuses on the intersection of genetic, phylogenetic, and functional dimensions of biodiversity. Successful proposals must integrate these three dimensions to understand interactions among them. While this focus complements several core programs in the Biological Sciences Directorate at NSF, it differs by requiring that multiple dimensions of biodiversity be addressed simultaneously, in novel ways, to understand their synergistic roles in critical ecological and evolutionary processes, especially pertaining to the mechanisms driving the origin, maintenance, and functional roles of biodiversity.

Awards: Standard Grant or Continuing Grant; Anticipated Funding Amount: \$8,000,000

Letters of Intent: Not required

Proposal Submission Deadline: March 26, 2021

Contacts: Christopher Balakrishnan, telephone: (703) 292-2331, email: Dimensions@nsf.gov

Grant Program: Long Term Research in Environmental Biology (LTREB)

Agency: National Science Foundation NSF 21-544

RFP Website: <https://www.nsf.gov/pubs/2021/nsf21544/nsf21544.htm>

Brief Description: The Long Term Research in Environmental Biology (LTREB) Program supports the generation of extended time series of data to address important questions in evolutionary biology, ecology, and ecosystem science. Research areas include, but are not limited to, the effects of natural selection or other evolutionary processes on populations, communities, or ecosystems; the effects of interspecific interactions that vary over time and space; population or community dynamics for organisms that have extended life spans and long turnover times; feedbacks between ecological and evolutionary processes;

pools of materials such as nutrients in soils that turn over at intermediate to longer time scales; and external forcing functions such as climatic cycles that operate over long return intervals.

All proposals submitted through the LTREB solicitation are processed by 1 of the 3 clusters in the Division of Environmental Biology: Ecosystem Science, Population and Community Ecology, and Evolutionary Processes. Proposals must address topics supported by these clusters. Researchers who are uncertain about the suitability of their project for the LTREB Program are encouraged to contact the cognizant Program Officer.

Ecological research on marine populations, communities and ecosystems is not supported by LTREB and should be directed to the Biological Oceanography Program: (https://www.nsf.gov/funding/pgm_summ.jsp?pims_id=11696&org=OCE). However, research that examines the evolutionary dynamics of marine populations or communities will be accepted. Investigators who are uncertain about the suitability of their research for LTREB are strongly encouraged to contact the managing Program Officers listed in this solicitation.

Awards: Standard Grant; Anticipated Funding Amount: \$6,000,000

Letters of Intent: Not required

Proposal Submission Deadline: Proposals Accepted Anytime

Grant Program: Integrative Research in Biology (IntBIO)

Agency: National Science Foundation NSF 21-543

RFP Website: <https://www.nsf.gov/pubs/2021/nsf21543/nsf21543.htm>

Brief Description: This solicitation invites submission of collaborative proposals that tackle bold questions in biology and require an integrated approach to make substantive progress. Integrative biological research spans subdisciplines and incorporates cutting-edge methods, tools, and concepts from each to produce groundbreaking biological discovery. The research should be synergistic and produce novel, holistic understanding of how biological systems function and interact across different scales of organization, e.g., from molecules to cells, tissues to organisms, species to ecosystems and the entire Earth. Such knowledge is critical to inform solutions to societal challenges, including natural resource management, resilience to environmental change, and global food security. Outcomes from integrative research will also inform and guide the development of new technologies that drive the nation's bioeconomy.

Integrative biological research depends on researchers who work in dynamic, diverse, and collaborative interdisciplinary teams. These teams should be fully engaged in the training and education of the next generation of scientists who will be future leaders in integrative research. A vibrant, inclusive, and integrative training environment will therefore produce a new generation of researchers who can navigate across subdisciplines and engage in integrative thinking.

Awards: Standard Grant or Continuing Grant; Anticipated Funding Amount: \$15,000,000

Letters of Intent: Not required

Proposal Submission Deadline: March 16, 2021

January 25, 2022

National Institutes of Health

Grant Program: Regulation of Brain Regional and Cell Type Specific Proteome Dynamics in Aging and Alzheimer's Disease (R01 Clinical Trial Not Allowed)

Agency: National Institutes of Health RFA-AG-21-033

RFP Website: <https://grants.nih.gov/grants/guide/rfa-files/RFA-AG-21-033.html>

Brief Description: The overall goal of this initiative is to invite research projects that will use the next generation of synthetic enzymes, chemical biology, and bioorthogonal amino acid whole-animal-labeling techniques in order to obtain the spatial and temporal proteome dynamics information that will also inform brain anatomical and genetic changes in intact mammals during aging and AD.

Areas of research interest include, but are not limited to, the following:

- The consequences of normal and pathological brain aging in regulating cell-specific newly synthesized proteome dynamics in, for example, synaptic plasticity;
- Methods by which genetic risk factors affect molecular, cellular, and physiological aspects of neuronal proteome in aging and AD;
- The roles of astrocytes and microglia in modulating proteome dynamics in synaptic degeneration and accumulation of AD-related pathologies; and,
- Impact of microenvironment, such as plaque accumulation, on the proteome dynamics in glia, microglia, and neuroinflammation.

It is expected that applications responding to this initiative will use the latest cell-type-specific labeling, imaging, and proteomic techniques with suitable model systems to understand the etiology of brain aging and AD. Therefore, applications that will only provide a global view of gene expression without any subcellular, cell-type, and brain regional specificity will be considered non-responsive. Examples of non-responsive studies outside of the scope of this FOA include, but are not be limited to, the following:

- Studies that use model organisms expressing AD-related genes in peripheral and non-CNS tissues;
- Studies that solely propose to use single and cell-type-specific RNAseq, transcriptomic, and epigenetic analyses; and,
- Studies that propose to generate new animal models and methodologies without a clear connection to the proteome dynamics of brain aging and AD.

Awards: Application budgets need to reflect the actual needs of the proposed project and should be limited to no more than \$750,000 in direct costs per year.

Letter of Intent: February 28, 2021

Proposal Submission Deadline: March 18, 2021

All applications are due by 5:00 PM local time of applicant organization. All types of non-AIDS applications allowed for this funding opportunity announcement are due on the listed date(s).

Applicants are encouraged to apply early to allow adequate time to make any corrections to errors found in the application during the submission process by the due date.

Contact: J. Austin Yang, Ph.D.; National Institute on Aging (NIA); Telephone: 301-496-9350; Fax: 301-496-1494; Email: austin.yang@nih.gov

Grant Program: Research Experience in Genomic Research for Data Scientists (R25)

Agency: National Institutes of Health PAR-21-075

RFP Website: <https://grants.nih.gov/grants/guide/pa-files/PAR-21-075.html>

Brief Description: The over-arching goal of this NHGRI R25 program is to support educational activities that encourage individuals from diverse backgrounds, including those from groups underrepresented in the biomedical and behavioral sciences, to pursue further studies or careers in research. To accomplish the stated over-arching goal, this FOA will support creative educational activities with a primary focus on:

- **Research Experiences:** For students currently enrolled in master's degree programs in data science (including programs in statistics/biostatistics, mathematics, computer science or equivalent fields) to provide hands-on exposure to genomics data sets as a substrate for their analytical skills. Through this announcement, NHGRI hopes to attract such students to the genomics workforce. NHGRI also seeks to both encourage data scientists who plan to opt for a terminal master's degree to join genomics research, as well as reinforce the intent of current master's degree students who are considering entering a doctoral program with an eventual dissertation focused on genomic data science.

This FOA is explicitly intended to support the entry of master's degree students in data science into the genomics workforce. Undergraduate or doctoral students will not be supported under this FOA. The following groups explicitly cannot be supported under this announcement:

- Data scientists who have completed an undergraduate degree but are not enrolled in a data science master's degree.
- Data scientists currently with extensive genomics research experience.
- Master's degree students currently enrolled in genomics programs who are interested in gaining exposure to data science.

For this FOA, "genomics research" is defined as biological investigation at the scale of the complete genome without having a focus on a single gene, a group of genes, a particular genomic locus, or a specific disease or organ system. "Genomics programs" are defined as research or educational programs that have a complete or substantial focus on genomics research, including both experimental and computational approaches towards genomics. Programs that focus on biological research or education with genetics topics included without a specific focus on genome-scale topics will ordinarily be considered outside the scope of "genomics programs".

Awards: Application budgets are limited to \$250,000 direct cost per year.

Letter of Intent: 30 days prior to application due date

Proposal Submission Deadline: May 25, 2021; May 25, 2022; May 25, 2023.

All applications are due by 5:00 PM local time of applicant organization. All [types of non-AIDS applications](#) allowed for this funding opportunity announcement are due on the listed date(s).

Applicants are encouraged to apply early to allow adequate time to make any corrections to errors found in the application during the submission process by the due date.

Grant Program: Application of Artificial Intelligence and Machine Learning for Advancing Environmental Health Sciences (R43 and R41; Clinical Trial Not Allowed)

Agency: National Institutes of Health RFA-ES-21-002 and RFA-ES-21-003

[R43](#) Small Business Innovation Research (SBIR) Grant - Phase I only

[R41](#) Small Business Technology Transfer (STTR) Grant - Phase I only

RFP Website: <https://grants.nih.gov/grants/guide/pa-files/PAR-21-025.html>

Brief Description: Through this Funding Opportunity Announcement (FOA), NIEHS is interested in supporting small business concerns (SBCs) to develop promising methodologies applying AI and ML approaches to advance environmental health research and decisions. The overall goal is to advance and adapt current AI and ML approaches by leveraging existing toxicity and environmental health data from published reports and public health records, including enhancing the accuracy of toxicity prediction or safety assessment, prioritizing chemicals for more comprehensive testing, identifying data or knowledge gaps in the field, and promoting novel approaches for exposure science such as estimating human exposures and health outcomes. The proposed approaches can focus on extracting and integrating information from environmental datasets or resources, developing algorithms and predictive models and applying those for predicting toxicity, and characterizing the biological responses or health consequences of chemical exposures.

Awards: NIEHS intends to commit \$2M in FY2021 to fund 6-8 awards.

Letter of Intent: February 28, 2021

Proposal Submission Deadline: March 29, 2021

All applications are due by 5:00 PM local time of applicant organization. All types of non-AIDS applications allowed for this funding opportunity announcement are due on the listed date(s).

Applicants are encouraged to apply early to allow adequate time to make any corrections to errors found in the application during the submission process by the due date.

Grant Program: Initiative for Maximizing Student Development (IMSD) (T32 - Clinical Trial Not Allowed)

Agency: National Institutes of Health PAR-21-025

RFP Website: <https://grants.nih.gov/grants/guide/pa-files/PAR-21-025.html>

Brief Description: The Overarching Objective of this Graduate Research Training Initiative for Student Enhancement program is to develop a diverse pool of well-trained Ph.D. biomedical scientists, who have the following technical, operational, and professional skills:

- A broad understanding across biomedical disciplines and the skills to independently acquire the knowledge needed to advance their chosen fields;
- Expertise in a biomedical scientific discipline and the skills to think critically and independently, and to identify important biomedical research questions and approaches that push forward the boundaries of their areas of study;
- A strong foundation in scientific reasoning, rigorous research design, experimental methods, quantitative and computational approaches, and data analysis and interpretation;
- The skills to conduct research in the safest manner possible, and a commitment to approaching and conducting biomedical research responsibly, ethically, and with integrity;
- Experience initiating, conducting, interpreting, and presenting rigorous and reproducible biomedical research with increasing self-direction;
- The ability to work effectively in teams with colleagues from a variety of cultural and scientific backgrounds, and to promote inclusive and supportive scientific research environments;
- The skills to teach and communicate scientific research methodologies and findings to a wide variety of audiences (e.g., discipline-specific, across disciplines, and the public); and
- The knowledge, professional skills and experiences required to identify and transition into careers in the biomedical research workforce (i.e., the breadth of careers that sustain biomedical research in areas that are relevant to the NIH mission).

Diversity at all levels—from the kinds of science to the regions in which it is conducted to the backgrounds of the people conducting it— contributes to excellence in research training environments and strengthens the research enterprise. This FOA is intended to support outstanding research training programs that will enhance diversity at all levels. As part of a larger initiative to enhance diversity, the IMSD program will support trainees earning a Ph.D. at research-intensive institutions.

Awards: Application budgets are not limited but need to reflect the actual needs of the proposed project.

Letter of Intent: Not Applicable

Proposal Submission Deadline: February 26, 2021; January 28, 2022; January 30, 2023, by 5:00 PM local time of applicant organization. All [types of applications](#) allowed for this funding opportunity announcement are due on these dates.

Applicants are encouraged to apply early to allow adequate time to make any corrections to errors found in the application during the submission process by the due date.

Grant Program: Funding Opportunity Announcement (FOA) for the National Defense Education Program (NDEP) for Science, Technology, Engineering, and Mathematics (STEM), and Biotechnology Education, Outreach, and Workforce Initiative Programs and Enhanced Civics Education

Agency: Department of Defense HQ0034-21-S-F001

Website: <https://www.grants.gov/web/grants/view-opportunity.html?oppId=330319>

Brief Description: The Department of Defense (DoD) National Defense Education Program (NDEP) seeks innovative applications on mechanisms to implement Science, Technology, Engineering, and Mathematics (STEM) education, outreach, and/or workforce initiative programs, here onto referred as STEM activities. NDEP also seeks innovative applications on mechanisms to specifically implement Biotechnology outreach and workforce development, which here onto will be referred as Biotech activities. Additional NDEP efforts also includes a pilot program in Enhanced Civics education.

The Department intends to award multiple grants in STEM activities, Biotech activities, and Enhanced Civics subject to the availability of funds. Applications for larger amounts may be considered on a case-by-case basis.

1. For STEM activities, there will be two (2) award levels:

(i) STEM activities with maximum award of \$3,000,000 over 3 years;

(ii) Scalable STEM activities with maximum award of \$6,000,000 over four (4) years.

2. For Biotech activities, awards will have a maximum award of \$3,000,000 over three (3) years.

3. For Enhanced Civics education, there will be one award, with a maximum of \$2,000,000 for a period of two (2) years.

NOTE: Respondents are not required to address all three focus areas, but should direct their responses to one of the areas, 1 (STEM), 2 (Biotech), or 3 (Enhanced Civics Education).

Awards: Award Ceiling: \$6,000,000; Award Floor: \$2,000,000

Letter of Intent: Please see below.

Proposal Deadline: This FOA has a two-step application process, starting with a **MANDATORY** white paper submission. Selected applicants will be **invited by the Government via email** to submit a full

technical application on Grants.gov for evaluation and possibly award consideration. White papers that fail to address the areas listed in the Funding Opportunity Description will not be evaluated and will not receive an invitation to submit a full technical application.

Grant Program: Research Interests of the United States Air Force Academy

Agency: Department of Defense Air Force Academy USAFA-BAA-2021

Website: <https://www.grants.gov/web/grants/view-opportunity.html?oppId=330175>

Brief Description: The USAFA invests in an active research program for three main reasons. First and foremost, research significantly enhances the cadet learning experience. Our research is done by, for and with cadets who work alongside fellow cadets and faculty mentors. Research provides cadets with rich independent learning opportunities as they tackle ill-defined problems and are challenged to apply their knowledge and abilities. Second, our research program provides opportunities essential for faculty development. Research broadens and deepens the experience base of the faculty. This infuses current, relevant, state-of-the-art and cutting-edge applications and examples into the curriculum. This also helps our faculty remain current in their respective fields. Third, at USAFA we strive to conduct research to enhance the ability of the Air Force to perform its mission. There are ongoing research projects spanning topics as diverse as super hypersonics, cyber security, spatial disorientation, athletic performance and homeland defense. This BAA offers a vehicle for research to be performed to satisfy these three objectives, while also meeting research needs of industry counterparts/serve a public purpose. USAFA's partnerships with non-Government firms enables development in the public arena, stimulating the studies in the greater technical community. All awards issued against this BAA must serve to benefit the objectives identified above.

Awards: It is anticipated awards will be made in the form of any appropriate contract type under the FAR or NonFAR instruments (i.e., Other Transaction (OT) for research efforts, or grants and cooperative agreements).

Letter of Intent: Please see below.

Proposal Deadline: USAFA is seeking unclassified research white papers and proposals that do not contain proprietary information. Requests for white papers/proposals are also transmitted via calls which may be published separately from the BAA at various times during the open period of the BAA.

This announcement remains open until superseded. White papers are reviewed and evaluated as they are received and may be submitted at any time. The white paper/proposal submission process is discussed in sections IV and V of this BAA. Proposals will be due according to specific instructions contained in a separate RFP notice resulting from favorable white paper evaluations or calls issued against this BAA.

Grant Program: Ultra-wide Bandgap RF Electronics Center Fiscal Year 2022

Agency: Department of Army Material Command W911NF-21-S-0003

Website: <https://www.grants.gov/web/grants/view-opportunity.html?oppId=330032>

Brief Description: The technical portion of this BAA consists of three main topics: Ultra-wide Bandgap (UWBG) Semiconductor Physics and Devices, UWBG Materials, and Physics-Driven Machine Learning for UWBG Materials and RF Device Development. A main topic may be further divided into sub-topics. Teams are encouraged to self-organize at any scale to create a proposal to address one, several, or all of these areas as they see fit. The TPOCs listed in this BAA will be able to assist potential proposers in this during the white paper stage, and this aspect will in particular be a focus at the Proposers' Day described

in I.A.6.a. The full Center will be selected from a set of these Teams (as separate Team awards) that will together cover the full scope of the BAA. Team awards can themselves include sub-awards to one or more institutions or organizations, because the necessary expertise in addressing the numerous facets of the topics may reside within different organizations. Teams will be appropriately scoped for the level of effort taken on. All Team awards will collaborate and cooperate among themselves and with the Army Science and Technology (S&T) enterprise in accomplishing the research objectives.

Awards: Multiple awards are anticipated. Award Ceiling: \$4,500,000

Letter of Intent: Please see below.

Proposal Deadline: White Papers Due: 15 February 2021

Final Proposals by Invite Only Due: 1 June 2021

Proposers' Day: 15 December 2020 1100-1500 Eastern Time. Virtual venue. Registration required and limited. Information available at link below: <https://www.eventbrite.com/e/ultra-wide-bandgap-rf-electronics-center-proposers-day-2020-tickets-127230577081>

Contact Information: Program Manager: Joe X Qiu, joe.x.qiu.civ@mail.mil , (919) 549-4297

Grant Program: Synthetic Biology

Agency: Department of Army Center for Synthetic Biology W911NF-21-S-0002

Website: <https://www.grants.gov/web/grants/view-opportunity.html?oppId=329839>

Brief Description: The Army Center for Synthetic Biology aims to promote research in specific areas of synthetic biology and to promote a candid and constructive relationship between the Army Science and Technology (S&T) enterprise and the synthetic biology research community.

Strong collaborations between DA and academia are necessary to overcome challenges associated with achieving the desired goals. Tackling these will require a large comprehensive cooperative effort (while also allowing for exploratory efforts for high-risk concepts) with a teamed approach involving multiple researchers collaborating across separate disciplines. Listed below are knowledge gaps and basic research opportunities which are to be addressed by the Army Center for Synthetic Biology. These are discussed in further detail as the Technical Thrust Areas in Section II.A.2.

- a. Predictive Design of Engineered Biological Materials
- b. Predictive Design of Engineered Cellular Systems in Defined Environments

Awards: Multiple awards are anticipated. Award Ceiling: \$2,000,000

Letter of Intent: Please see below.

Proposal Deadline:

Whitepapers Due:

Funding Area One (Team): 01 February 2021

Funding Area Two (Seedling): 01 February 2021, 01 February 2022, 01 February 2023, 01 February 2024

Final Proposals by Invite Only Due:

Funding Area One (Team): 24 May 2021

Funding Area Two (Seedling): 24 May 2021, 24 May 2022, 24 May 2023, 24 May 2024

Grant Program: Science & Technology for Advanced Manufacturing Projects (STAMP)

Agency: Department of Defense Office of Naval Research N00014-21-S-B002

Website: <https://www.grants.gov/web/grants/view-opportunity.html?oppId=329699>

Brief Description: The Department of Defense Manufacturing Technology Program (ManTech) is the Defense Department's investment mechanism for staying at the forefront of defense-essential

manufacturing capability. The Program develops technologies and processes for the affordable and timely production and sustainment of defense systems. The Program impacts all phases of acquisition. It aids in achieving reduced acquisition and total ownership costs by developing, maturing, and transitioning key manufacturing technologies. ONR will focus investments on those that have the most benefit to the warfighter and include quick-hitting, rapid response projects to address immediate manufacturing needs. The ManTech Program targets the needs of our warfighters and weapon system programs by helping to find and implement affordable low-risk solutions. The ManTech Program:

- Provides the crucial link between technology invention and development and industrial applications;
- Matures and validates emerging manufacturing technologies to support low-risk implementation in industry and DoD facilities, for example depots and shipyards;
- Addresses production issues from system development through transition to production and sustainment;
- Disseminates information concerning improved manufacturing improvement concepts, including information on such matters as best manufacturing practices, product data exchange specifications, computer-aided acquisition and logistics support, and rapid acquisition of manufactured parts; and
- Sustains and enhances the skills and capabilities of the manufacturing work force.

Awards: Multiple awards are anticipated.

Letter of Intent: Not required.

Proposal Deadline: This announcement will remain open until 30 October 2021 or until replaced by a successor BAA, whichever comes first.

[Department of Transportation](#)

Grant Program: Pilot Program for Transit-Oriented Development (TOD) Planning 2020 Notice of Funding

Agency: Department of Transportation FTA-2020-014-TPE

Website: <https://www.fhwa.dot.gov/fastact/factsheets/advtranscongmgmtfs.cfm>

Brief Description: The Pilot Program for TOD Planning is intended to fund comprehensive planning that supports economic development, ridership, multimodal connectivity and accessibility, increased transit access for pedestrian and bicycle traffic, and mixed-use development near transit stations. The program also encourages identification of infrastructure needs and engagement with the private sector. Consistent with statutory direction, FTA is seeking comprehensive planning projects covering an entire transit capital project corridor, rather than proposals that involve planning for individual station areas or only a small section of the corridor. To ensure any proposed planning work reflects the needs and aspirations of the local community and results in concrete, specific deliverables and outcomes, transit project sponsors must partner with entities with land use planning authority in the transit project corridor to conduct the planning work.

The Pilot Program for TOD Planning helps support FTA's mission of improving public transportation for America's communities by providing funding to local communities to integrate land

use and transportation planning around a new fixed guideway or core capacity improvement project. Per statute, any comprehensive planning funded through the program must examine ways to improve economic development and ridership, foster multimodal connectivity and accessibility, improve transit access for pedestrian and bicycle traffic, engage the private sector, identify infrastructure needs, and enable mixed-use development near transit stations.

Award: The Federal Transit Administration (FTA) announces the availability of approximately \$6.2 million in Pilot Program. FTA may award amounts ranging from \$250,000 to \$2,000,000.

Letter of Intent: Not Required

Proposal Deadline: An applicant must submit a proposal electronically by **11:59 p.m. Eastern Daylight Time on October 26, 2020.**

Grant Program: Scientific Cooperation Research Program (SCRP)

Agency: Department of Agriculture USDA-FAS-10961-0700-10-21-0001

Website: <https://govtribe.com/opportunity/federal-grant-opportunity/scientific-cooperation-research-program-scrp-usdafas10961070010210001>

Brief Description: The Scientific Cooperation Research Program (SCRP) supports FAS' Borlaug Fellowship Program and other strategic goals and utilizes the scientific communities' accumulated knowledge and technologies to help aid in developing practical solutions to address issues including agricultural trade and market access, animal and plant health, biotechnology, food safety and security, and sustainable natural resource management. All applications must include foreign collaborations, and

projects should not exceed two years. Funding may be allocated to foreign collaborators through sub-awards. Background The Scientific Cooperation Research Program (SCRCP) is a Foreign Agricultural Service Office, (FAS) administered program that has been in existence for several decades. Historically, SCRCP has funded hundreds of collaborative research programs between U.S. and foreign scientists.

Awards: This program supports up to 10 collaborative research programs annually, up to \$50,000.

Proposal Deadline: March 01, 2021

Grant Program: Agriculture and Food Research Initiative - Foundational and Applied Science

Agency: Department of Agriculture USDA-NIFA-AFRI-007692

Website: <https://nifa.usda.gov/funding-opportunity/agriculture-and-food-research-initiative-foundational-applied-science-program>

Brief Description: The AFRI Foundational and Applied Science Program supports grants in six AFRI priority areas to advance knowledge in both fundamental and applied sciences important to agriculture. The six priority areas are: Plant Health and Production and Plant Products; Animal Health and Production and Animal Products; Food Safety, Nutrition, and Health; Bioenergy, Natural Resources, and Environment; Agriculture Systems and Technology; and Agriculture Economics and Rural Communities. Research-only, extension-only, and integrated research, education and/or extension projects are solicited in this Request for Applications (RFA). See Foundational and Applied Science RFA for specific details.

Letter of Intent: Required.

Awards: Up to \$15,000,000; Anticipated available funding: \$290,000,000

Proposal Deadline: Thursday, July 29, 2021

[Department of Labor](#)

Grant Program: Workforce Pathways for Youth Grant Program

Agency: Department of Labor FOA-ETA-21-01

Website: <https://www.grants.gov/web/grants/view-opportunity.html?oppId=330348>

Brief Description: This Announcement solicits applications for the Workforce Pathways for Youth grant program. The purpose of this program is to increase alignment between workforce and OST programs and expand job training and workforce pathways for youth and disconnected youth including soft skill development, career exploration, job readiness and certification, summer jobs, year-round job opportunities, and apprenticeships. The grant program, as outlined in the Department of Labor Appropriations Act, 2020 (Public Law 116-94) Statement of Managers, provides \$10,000,000 to utilize the demonstration grant authority under the dislocated worker national reserve for grants to support national out-of-school time (OST) organizations that serve youth. These grants will place an emphasis on age-appropriate workforce readiness programming to expand job training and workforce pathways for youth, including soft skill development, career exploration, job readiness and certification, summer jobs, year-round job opportunities, and apprenticeships. Funding will also support partnerships between workforce boards and youth serving organizations.

Awards: Awards up to \$5,000,000; Awards floor: \$3,300,000. Anticipated available funding: \$10,000,000.

Department of Commerce/EDA

Grant Program: FY2021 Coastal and Ocean Modeling Testbed Project

Agency: U.S. Department of Commerce NOAA-NOS-IOOS-2021-2006729

Website: <https://www.grants.gov/web/grants/view-opportunity.html?oppId=330267>

Brief Description: The U.S. Integrated Ocean Observing System (IOOS®) is a national and regional partnership working to provide ocean, coastal and Great Lakes observations, data, tools, and forecasts to improve safety, enhance the economy, and protect our environment. The U.S. IOOS Program is seeking to fund projects which advance new or existing solutions that address long standing and emerging coastal modeling and forecast product development challenges. This announcement specifically funds activities needed to progress through the transitional stages from research toward full operations (such as system integration, testing, validation, and verification). Projects will be expected to participate in and advance the operation of the U.S. IOOS COMT under a community modeling environment. Funding will be targeted to models, tools or products, with demonstrated operators and end users, that are sufficiently mature for evaluation and transition to long term operations.

Awards: Total estimated funding for all awards is up to \$2 million per year from the U.S. IOOS Program. Multiple awards are anticipated, subject to availability of funds, in amounts up to \$300,000 per year for up to three years.

Letter of Intent: Contact the program director.

Proposal Deadline: February 26, 2021

Grant Program: FY2021 to FY2023 NOAA Broad Agency Announcement (BAA)

Agency: U.S. Department of Commerce NOAA-NFA-NFAPO-2021-2006626

Website: <https://www.grants.gov/web/grants/view-opportunity.html?oppId=329261>

Brief Description: This Broad Agency Announcement is a mechanism to encourage research, education and outreach, innovative projects, or sponsorships that are not addressed through NOAA's competitive discretionary programs. This announcement is not soliciting goods or services for the direct benefit of NOAA. Funding for activities described in this notice is contingent upon the availability of Fiscal Year 2021, Fiscal Year 2022, and Fiscal Year 2023 appropriations. Applicants are hereby given notice that funds have not yet been appropriated for any activities described in this notice. Publication of this announcement does not oblige NOAA to review an application beyond an initial administrative review, or to award any specific project, or to obligate any available funds. As an agency with responsibilities for maintaining and improving the viability of marine and coastal ecosystems, for delivering valuable weather, climate, and water information and services, for understanding the science and consequences of climate change, and for supporting the global commerce and transportation upon which we all depend, NOAA must remain current and responsive in an ever-changing world.

Awards: Contingent to the availability of funds.

Letter of Intent: Contact the program director.

Proposal Deadline: Applications can be submitted on a rolling basis starting from the publication date of this Broad Agency Announcement up to 11:59:59 p.m., Eastern Daylight Time on September 30, 2023.

[EPA](#)

Grant Program: Training and Technical Assistance to Improve Water Quality and Enable Small Public Water Systems to Provide Safe Drinking Water

Agency: Environmental Protection Agency EPA-OW-OGWDW-20-02

Website: <https://www.grants.gov/web/grants/view-opportunity.html?oppId=330212>

Brief Description: EPA is soliciting applications to provide training and technical assistance to private drinking water well owners to improve water quality. Training and technical assistance activities provided to these systems, communities, and private drinking water well owners should be made available nationally in rural and urban communities and to all personnel of these systems, including personnel of tribally-owned and -operated systems. Eligible activities include training and technical assistance only. Infrastructure projects such as repairing water or sewer lines, adding new equipment, or upgrading, retrofitting or rehabilitating existing equipment, are not eligible for funding under this announcement. The three National Priority Areas and activities to be funded under this announcement support EPA's FY 2018-22 Strategic Plan, available at www.epa.gov/planandbudget/strategicplan.

Award: The total estimated amount of federal funding potentially available under this announcement is \$17,700,000, depending on Agency funding levels, the quality of applications received, agency priorities, and other applicable considerations.

Submission Deadline: February 12, 2021

[Department of Energy](#)

Grant Program: Materials and Chemical Sciences Research for Quantum Information Science

Agency: Department of Energy Office of Science DE-FOA-0002449

Website: <https://science.osti.gov/bes/Funding-Opportunities>

Brief Description: The DOE SC program in Basic Energy Sciences (BES) announces its interest in receiving applications from single investigators and from teams for support of experimental and theoretical efforts to advance understanding of quantum phenomena in systems that could be used for quantum information science (QIS) and the use of quantum computing in chemical and materials sciences research. New and renewal applications are invited in two topical areas: 1) Quantum Computing; and 2) Next-Generation Quantum Systems.

The BES mission is to support fundamental research to understand, predict, and ultimately control matter and energy at the electronic, atomic, and molecular levels to provide the foundations for new energy technologies and to support DOE missions in energy, environment, and national security. BES also supports world-class, open-access scientific user facilities consisting of a complementary set of intense x-ray sources, neutron sources, and research centers for nanoscale science. Further information about BES research programs can be found at: • Chemical Sciences, Geosciences, and Biosciences: <https://science.osti.gov/bes/csgeb> • Materials Sciences and Engineering: <https://science.osti.gov/bes/mse> • Quantum Information Science: <https://science.osti.gov/bes/Research/qis>

Awards: DOE anticipates that, subject to the availability of future year appropriations, a total of up to \$75 million in current and future fiscal year funds will be used to support awards under this FOA.

Letter of Intent: Please see below.

Submission Deadline: Submission Deadline for Pre-Applications: January, 27, 2021 at 5:00 PM Eastern
A Pre-Application is required Pre-Application Response Date: March 1, 2021 Submission Deadline for Applications: April 14, 2021 at 11:59 PM Eastern

Grant Program: FY21 SETO Systems Integration and Hardware Incubator Funding Program

Agency: Department of Energy EERE DE-FOA-0002437

Website: <https://epicweb.ee.doe.gov/EPICWeb/#/public/submission/opportunityDetail/2333>

Brief Description: This funding opportunity announcement (FOA) is being issued by the U.S. Department of Energy's (DOE) Office of Energy Efficiency and Renewable Energy (EERE) Solar Energy Technologies Office (SETO). SETO's mission is to accelerate the development and application of technology to advance low-cost, reliable solar energy in the United States. Achieving SETO's goals requires sustained, multifaceted innovation. Projects supported by this FOA will advance R&D and RD&D in PV, CSP, and solar grid integration technologies. The majority of the innovations sought here will improve the scalability of solar, whether it is reaching critical manufacturing scale for new materials and processes, or allowing growth while maintaining grid reliability.

Engaging in R&D and RD&D activities with the support of public funds also comes with the responsibility to disseminate the outcomes to the nation's researchers, its industry stakeholders, and the general public. It is a goal of this FOA to encourage, where applicable, broad and lasting access to important datasets and software code that the projects generate.

With this FOA, the office intends to fund ambitious, high-impact research in the following areas:

Topic Area 1: Grid-Forming Technologies Research Consortium

Topic Area 2: Integrating Behind-the-Meter Solar Resources into Utility Data Systems

Topic Area 3: Hardware Incubator

Topic Area 3a: Hardware Incubator – Product Development

Topic Area 3b: Hardware Incubator – Product Development & Demonstration

Awards: EERE expects to make a total of approximately \$45,000,000 of federal funding available for new awards under this FOA,

Letter of Intent: Please see below.

Submission Deadline: Submission Deadline for Letter of Intent: January 11, 2021, 5:00 p.m. ET
Submission Deadline for Concept Papers: January 25, 2021, 5:00 p.m. ET
Submission Deadline for Full Applications: March 29, 2021, 5:00 p.m. ET
Expected Submission Deadline for Replies to Reviewer Comments: April 28, 2021, 5:00 p.m. ET

Contact: All questions and answers related to this FOA will be posted on EPIC at: <https://epicweb.ee.doe.gov>.

Grant Program: Scientific Discovery Through Advanced Computing: Partnerships in Basic Energy Sciences

Agency: Department of Energy Office of Science DE-FOA-0002441

Website: <https://www.grants.gov/web/grants/view-opportunity.html?oppId=330209>

Brief Description: The DOE SC programs in Basic Energy Sciences (BES) and Advanced Scientific Computing Research (ASCR) announce their interest in receiving applications from interdisciplinary teams to establish Partnerships under the SC-wide Scientific Discovery through Advanced Computing (SciDAC) program in specific targeted topic areas that relate to the BES and ASCR missions.

This Announcement invites new research proposals for the SciDAC-5 Partnerships in BES that enable or accelerate scientific discovery employing DOE High-End/High-Performance Computing (HPC) facilities, e.g., see <https://science.osti.gov/ascr/Facilities>. For the purposes of this Announcement, the term “DOE HPC” has been expanded to include the high performance production computational systems at the National Energy Research Scientific Computing Center (NERSC), as well as those existing, or planned to be available by 2022, at the Argonne Leadership Computing Facility (ALCF), Oak Ridge Leadership Computing Facility (OLCF), or similar DOE computing facilities. ASCR expects that DOE HPC will include exascale machines now planned for these Facilities (Perlmutter, Aurora, Frontier) within the period covered by this Announcement, please consult the following websites for further information:

<https://www.nersc.gov/systems/perlmutter>, <https://alcf.anl.gov/aurora>,
<https://www.olcf.ornl.gov/frontier> <https://science.osti.gov/ascr/Facilities/User-Facilities/Upgrades>

Awards: Award range: \$1,000,000 - \$2,000,000. DOE anticipates that, subject to the availability of future year appropriations, a total of up to \$32 million in current and future fiscal year funds will be used to support awards under this FOA for grants, cooperative agreements, and National Laboratory authorizations.

Letter of Intent: Please see below.

Submission Deadline: Submission Deadline for Pre-Applications: January 19, 2021 at 5 PM Eastern Time A Pre-Application is required Pre-Application Response Date: February 16, 2021 Submission Deadline for Applications: April 6, 2021 at 11:59 PM Eastern Time

Contact: Dr. Matthias Graf (Basic Energy Sciences) Matthias.Graf@science.doe.gov; Dr. Randall Lavolette (Advanced Scientific Computing Research) Randall.Lavolette@science.doe.gov

Grant Program: Hydrogen and Fuel Cell Technologies Office (HFTO) R&D FY 2021 Funding Opportunity Announcement

Agency: Department of Energy Office of Science DE-FOA-0002446

Website: <https://epicweb.ee.doe.gov/EPICWeb/#/public/submission/opportunityDetail/2313>

Brief Description: Hydrogen and fuel cells represent a growing industry with potential to enable energy resiliency, energy security, emission reductions and economic growth.

This FOA supports research and development (R&D) to enable “H2@Scale” - a DOE initiative to achieve large scale production, storage, transport, and utilization of hydrogen across multiple sectors.^[1] Supporting EERE’s core priorities of energy affordability, integration and storage, H2@Scale research, development and demonstration (RD&D) aims to advance the adoption of hydrogen and fuel cell technologies in integrated energy systems across key applications that provide a value proposition as well as reduce emissions. However, a number of challenges remain including cost, performance, durability, manufacturing and scale-up issues, and developing integrated systems that demonstrate the unique technical, economic and environmental benefits of hydrogen and fuel cells.

To address these challenges, HFTO supports a comprehensive RD&D portfolio addressing materials, component- and systems-level R&D on hydrogen and fuel cell technologies (e.g., MW-scale electrolyzers, fuel cells for heavy-duty transportation applications, hydrogen delivery and fueling infrastructure, among others) ; and technology acceleration efforts addressing first-of-a-kind demonstrations of integrated energy systems, as well as manufacturing innovations and safety codes and

standards. HFTO RD&D relies heavily on collaborations among various industry and university stakeholders and the national laboratories, including through HFTO-managed consortia.

Awards: Anticipated available funding: \$8,000,000

Letter of Intent: Please see below.

Submission Deadline: Submission Deadline for Concept Papers: 01/15/2021 5:00pm ET Submission Deadline for Full Applications: 03/08/2021 5:00pm ET Expected Submission Deadline for Replies to Reviewer Comments: 04/09/2021 5:00pm ET

[NASA](#)

Grant Program: ROSES 2020: Heliophysics Flight Opportunities in Research and Technology

Agency: NASA NNH20ZDA001N-HFORT

Website: <https://nspires.nasaprs.com/external/solicitations/summary.do?solId=%7BDBCE844C-1D0B-D36A-12A6-86FC953F1B6C%7D&path=&method=init>

Brief Description: The Heliophysics Flight Opportunities in Research and Technology (H-FORT) program seeks to fund space and sub-orbital science and science-enabling investigations that use platforms that include SmallSats (including CubeSats), Balloon Missions, and Hosted Rideshare Payloads, such as International Space Station (ISS)-attached payloads. The program encourages the development of technologies that will enable investigation of heliophysics science questions. All proposed investigations must be responsive to NASA Heliophysics Science Goals. H-FORT is a component of the Heliophysics Research Program and proposers interested in this program element are encouraged to see B.1 The Heliophysics Research Program Overview for Heliophysics-specific requirements and Science Goals and objectives. Common requirements for all ROSES elements are found in the ROSES Summary of Solicitation and the 2020 Proposer's Guidebook (https://prod.nais.nasa.gov/pub/pub_library/srba/prosers_guidebooks.html). The order of precedence is the following: B.11 (this document) followed by B.1, followed by the ROSES Summary of Solicitation, and the Proposer's Guidebook. Proposers should be familiar with all of these resources.

Awards: Available funding: \$3,000,000

Notice of Intent: Not required.

Proposal Deadline: March 26, 2021

Contact: Dan Moses, Telephone: (202) 358-0558 Email: dan.moses@nasa.gov

Amy Winebarger, Telephone: (256) 961-7509 Email: amy.r.winebarger@nasa.gov

Grant Program: ROSES 2020: In-Space Validation of Earth Science Technologies

Agency: NASA NNH20ZDA001-INVEST

Website: <https://nspires.nasaprs.com/external/solicitations/summary.do?solId=%7BA5B2B8C3-E494-E766-CECA-B07A359AACCC4%7D&path=&method=init>

Brief Description: Through the In-Space Validation of Earth Science Technologies (InVEST) program, NASA's Earth Science Division validates new technologies, measurement concepts and techniques, prior to their inclusion in Earth science missions. The objective of InVEST is to test viability of these concepts in the space environment, especially those attributes that cannot be fully tested on the ground or in airborne systems, to reduce the risk to future Earth science missions. The validation of new technologies and measurement concepts/techniques in space can significantly reduce the risk to future Earth science

missions. The In-Space Validation of Earth Science Technologies (InVEST) program element is intended to overcome these limitations.

Awards: Available funding: \$6,000,000

Notice of Intent: January 29, 2021

Proposal Deadline: March 9, 2021

Contact: Sachidananda R. Babu, Flight Validation Lead, InVEST Program Manager, Earth Science Technology Office Telephone: (301) 286-7304 Email: sachidananda.r.babu@nasa.gov

National Endowment of Humanities

Grant Program: Institutes for Higher Education Faculty

Agency: National Endowment for the Humanities 20210309-EH

Website: <https://www.neh.gov/grants/education/institutes-higher-education-faculty>

Brief Description: NEH Institutes are professional development programs that convene higher education faculty from across the nation in order to deepen and enrich their understanding of a variety of topics in the humanities and enrich their capacity for effective scholarship and teaching.

Most fundamentally, institutes:

- allow immersive study of topics of significance to the humanities
- foster new fields of study and/or revitalize existing areas of inquiry
- reinvigorate teaching and increase intellectual impact in the classroom
- build lasting communities that foster participants' intellectual and professional collaboration

A pre-recorded webinar will be posted by January 15, 2021

Award: Maximum award amount: Up to \$235,000

Proposal Deadline: Optional Draft due February 8, 2021; Application due March 9, 2021

Contact: Contact the Division of Education Programs Team 202-606-2324; institutes@neh.gov

Private Foundations

Bill & Melinda Gates Foundation

Grant Program: Grand Challenge: ICODA COVID-19 Data Science

Agency: Bill & Melinda Gates Foundation

Website: <https://icoda-research.org/research/our-research/#grandchallenge>

Brief Description: ICODA and Grand Challenges are delighted to launch the new Grand Challenges ICODA COVID-19 Data Science pilot initiative that will focus on addressing major questions about how to reduce the harm of COVID-19 and future pandemics. The initiative aims to unite data and develop processes, analytical tools and infrastructure to achieve rapid scientific progress and impact, and will be a pilot for the ongoing [Grand Challenges](#) that seek to develop global collaboration and innovative approaches to major health challenges.

Grand Challenges is a family of initiatives, launched by the Bill & Melinda Gates Foundation in 2003, to solve key global health and development problems. Selected projects will become part of ICODA's portfolio of Driver Projects, helping to further develop processes, tools and infrastructure to accelerate

scientific progress and foster collaboration between researchers and the public around the world. This pilot will lead to a larger Grand Challenges Data Science call in late 2021, which will be led by global Grand Challenges partners.

Awards: The Grand Challenges ICODA COVID-19 Data Science initiative will provide awards of up to US\$100,000 for studies lasting for between 6-12 months, starting in mid-March 2021 onwards. In addition, successful applicants will have access to ICODA's digital workbench, as well as technical and wider support from ICODA and its partners.

Letter of Intent: Not required

Proposal Deadline: January 19, 2021

Contact: If you have any questions, please contact Richard Rosenberg at rmr@njit.edu
